

Aquahawk 72 hour snapshot examples in Manheim, PA

Above, is 72 hours of usage for one Manheim family (3 adults/2 teens). High usage may occur in cycles depending on habits with showers/baths, and laundry. There are many factors, but there should be a wave like pattern. The total usage was 554 gallons.

Below, is what 72 hours of use at another location looks like with a leaky toilet, one of our most common types of leaks, since it is not always seen or heard right away. A leaking toilet flapper can waste between 3 to 4.5 gallons per minute (300 to 450 gallons per hour). This total usage was 1325 gallons.
